

## Less fixture. More light.

At Lucifer Lighting, we use innovative design and advanced technology to make small fixtures that create big impacts. For example, our newest downlight features two concealed, self-locking, internal gear trains that allow trim rotation, tilt and hot aim to be precision-adjusted from the room side, so you see the effect as you're creating it. And appliquéés are low-profile, self-leveling, and trimless, so you get a perfect, seamless finish on every installation.

### The industry's first dual-axis gear-driven downlight, only from Lucifer Lighting.

- Adjust rotation and tilt from inside the room, with the light on, using just a screwdriver.
- Control beam, color and glare by stacking up to three effects devices in any fixture.
- Awarded "Best of Category", for downlights, wallwashers and accent lights, Lightfair International 2007.

Minimal fixtures; maximal impact.
